Document File 929

Events of [REDACTED] Containment

Reports obtain and recounted by [REDACTED]

Content Warning: Not suitable for young children (Ages 1 – 14) to play!

The following information held in this report is for top personnel only, however judging the events occurring in [REDACTED], this information may be found by the new age survivors after this mass bio terrorist attack. What lies ahead in this document may be deemed either an act of the strength in humanitarian adaptability or accumulation of acts that would be deemed by society without calamity, as the actions of a ruthless creature. I, [REDACTED], care not what you think of our actions, as we here at the CDC have been tasked with preventing destruction of [REDACTED] and we will do whatever deemed necessary to see that goal met.

To begin, the origins of this bio terrorist attack at the time of this report's creation, remain a mystery to us here at the [REDACTED] division. However, what was clear is that this virus was a manmade airborne creation, designed to slowly infect the populace within this metropolitan area. The host of this virus, which we have named "X01- Red," begins to slowly lose sense of their environment and sense of bodily control. Vomiting, lost of sight, and red whelps start to hinder the person's ability to function. This then leads to temporary coma that overtakes the infected

person, the red whelps on their body grow larger as they sleep. The final stage of the virus occurs when the individual reawakens from there two to three-day coma, the infected becomes hallucinogenic and begins to show aggressive behaviors towards objects and individuals around them. Within the hour, the enlarged red whelps bust, and massive blood loss occurs to the infected, without proper medical care to seal these said wounds, the infected will surely die.

With the entirety of [REDACTED] being in the infection zone, our work would be overwhelming. Yet we had hope that the populace would be willing to work with us...

(To begin the game, the first player of four may draw one green card. Please read the scenario out loud. From there, you must decide out of the three answers given, which is best the choice given. If you are correct, you gain +1 life point. If you are wrong, you gain 0 points from the Green Card. In future events, Yellow Cards will take -1 life point away. Red Cards will take -3 life points away. The winner will be decided based on who survives through the red card events.)

((Note: For prototype testing, you will be given +10 life points to start off the game. This will not be an aspect in the actual version of this game.))

Green Cards; Questions and Answers

Scenario 1#

“One of the first few tasks we were assigned prior in locking the city down, was to barricade different exit points that headed in direction to the highway. With that in mind, we also had to secure these locations without the public becoming aware... This led to the solution of,

- A. Working in the middle of the night to secure each exit point to the highway while traffic was few in and far between.
- B. Using explosives to destroy road ways out of the city and state there was a “gas leak” that damaged the roads.
- C. Disguise ourselves as construction workers, and state “we are repairing the roads” by blocking them off. Further this, we tell civilians, “this is part of the cities’ road repairs funds that are going into effect which will last the entire week.” ((Correct Answer))

Scenario 2#

“With the crisis about emerge, we needed to establish a base of operations within the city. This location would be key not only to monitor the situation on ground zero, but also a place we could secure patients for testing and “potentially” save their lives. This led to the choice of base being,

- A. A large hospital facility that was centered in the middle of the city. Giving us both a medical base of operations, in addition to medical staff that would be vital towards treating each patient. ((Correct Answer + 1 Life Point Added))
- B. An underground military bunker that was created in the 1950s. Which had been quickly remodeled to help sustain our operations within the city with multiple tunnel locations that sprawled buildings throughout ground zero.
- C. A large empty factory that was on the outskirts of ground zero. With proper equipment and a rushed repair of the building, we were able to renovate it into a base of operations and a medical facility where we could observe victims of the virus safely through contained areas. ((Correct Answer))

Scenario 3#

“Private donors would be needed to help financially back this large-scale operation. X01- Red, has not been made aware public eye, and the level of security in this matter is of the utmost importance. The diplomat [REDACTED] has reached out previously to help fund CDC operations across the world. With that in mind this was how we discussed this matter with [REDACTED].

- A. “A humanitarian crisis is about to emerge... as such event will shake the global economy and infrastructure heavily, we require your aid that you have previously offered us in the past. Please lend us your aid.”
- B. “Under circumstances of this event, we are going to require you to sign a private non-disclosure agreement before we begin discussion of this point of operation which we are requesting financial aid on. Once this has been done, and we have given you a full briefing on the situation, we will then be moving you and your immediate family to an undisclosed location for protection.” **((Correct Answer))**
- C. “In recognition of your previous offer, we are going to request it immediately. We apologize about the suddenness of our request... however in mind of our nation’s security, we are demanding this aid, now.”

Scenario 4#

“Upon our descent into the city, we notice that homeless population was rampant in several reservoir locations. It dawned on us quickly that the individuals of these locations would be easily infected with the X01- Red virus and could potentially spread the disease throughout the entire country. This led to the course of action being,

- A. Was to detain the homeless compounds around these reservoirs without governmental consent towards said imprisonment. From there we moved the infected to secure locations for observation.
- B. Using humanitarian outreach, we began to help the homeless move away from the reservoir areas into “medical outreach camps” to help treat the infected in a mobile operational unit. **((Correct Answer))**
- C. Despite it being against our education and morals... we decided that the only way to prevent this situation from enlarging was to “remove” the homeless population with these areas. Setting up soup kitchens in these areas, we used rat poisoned food to help us remove the infected quickly... **((Obvious Wrong Answer, +2 Life points))**

Scenario 5#

“Families of migrants would be deemed a highly affected populace to the X01- Red virus due to their living conditions within [REDACTED]. With all that in consideration, as we entered the city, the first act to help these individuals would be,

- A. With translators by our side, we would go to the homes of the migrants in ground zero in hazmat suits, offering our aid to their incoming plight.
- B. With no translators being cleared for this operation, we would go to the homes and community pavilions of the migrants within ground zero and detain these individuals by military force. With tear gas and sleep darts on hand, we captured the migrants by force, taking them to a secure facility for observation and forced treatment.
- C. With translator hired by the CDC and given proper secure clearance. We began to recruit community migrant leaders to help us secure relations within ground zero.

Giving the choice of coming to us for transportation to our secure location for medical treatment towards the X01-Red virus. ((Correct Answer))

(Story Continue)

After first two days had passed, my associates and I began to believe that perhaps this virus was a ruse and that perhaps our previous reports had been grossly mistaken. Unfortunately, this blissful thinking came to abrupt end as agent [REDACTED] wheeled in an elderly man who was screaming at the top of his lungs. Shaking his stroller violently as he to reach out for his own body. At the sight of all this... I knew deep down this was the first image of the epidemic upon us, that will be forever ingrained in my mind.

From here forward, all protocols must be met in order to maintain security within [REDACTED] . . . Other wise all stability will surely crumble.

Yellow Cards; Questions and Answers

Scenario 6#

“Near barricade A, a group of infected have gather to attempt to break through the containment area. Though no children are among this congregation of young men and women, violence might be necessary in order to contain these individuals before they attempt to breach through. With all this in mind, our decision was,

- A. To attempt reasoning with the congregation and offer the medical aid they needed. Trying to reinsure that we were not threat to their plight, but rather apart of group trying to save their lives. ((Correct Answer, though as this was said... the congregation ignores the

CDC intervention and begins to attack the negotiator with anything they can find. This leads to fight with the army killing the group. (-5 life points...))

B. We open fire on the group with machine guns. Killing them all without little resistance.

((Wrong Answer, -2 life points))

C. With tear gas and sleeping darts, we cause the congregation to disperse back into

... And those who were unable to retreat, were detained by us to prevent further conflict. ((Correct Answer))

Scenario 7#

“The End is Near!” Claimed a priest covered in red whelps. “We must prepare ourselves for the end of days that has fallen upon us!” As we enter the chapel, we quietly try to find seating without disturbing the communal worship... however the priest quickly noticed us in our hazmat suits and call on us. “Tell us CDC! What are we to do in this calamity!?”

A. We address the priest and the attendees of this Church to remain calm. That the CDC is doing everything in its power to resolve the situation quickly. ((Wrong Answer -1 life point))

B. We take our leave not commenting on finding a solution for this issue. ((Wrong Answer -1 life point))

C. Our lead community outreach manager asks the priest if they may take the stage. The priest takes no offence to this and allows our collaborator to take stage, addressing the audience about the events that currently inflicted them. Then giving protocol measures on how they should treat their bodies while they deal with the X01-Red. ((Correct Answer +2 life points))

Scenario 8#

“A migrant woman rushes from a nearby home within ground zero with a man chasing her down. She heads to our onsite caravan as we quickly see cradled in her arms is young infant. The man behind her though is shouting repulsively in language we could not quickly identify. Our course of action was clear as we,

- A. Sending two male agents, they step in front of the mother letting her pass through into safety. They then proceed to stop the chasing male despite his obvious protest. Until matter is resolved and a translator can arrive, the safety of the mother and infant is of top priority. ((Correct Answer))
- B. Letting the woman, infant, and man come into tent. We try to communicate with them in understanding what all is going on. ((Wrong Answer))
- C. Sending a male and female agent, the two stop the woman from approaching the tent. Letting the yelling man catch up to the group. From there both agents attempt to communicate to the individuals on what all is happening. ((Wrong Answer))

Scenario 9#

“As we approached the coma phase of the X01-Red virus, one my associates, [REDACTED], pulled me over to discuss a rumor they had heard among our staff. They revealed to me that several members of our CDC team were considering robbing infected individuals’ homes while they were in coma. Even suggesting doing horrific acts towards people while there bodies where unable to fight back. This led to my following response,

- A. “Let them do as they please... if they wish to lead to their own down falls then this is what must happen first.” ((Wrong Answer))

B. “We are going to have to confront them before they proceed any further with this.

The CDC represents humanities act of caring for one another, not violating those ethics which we all agreed on.” ((Correct Answer... but as you approached the other members of your CDC team, they became fully aware that you would not support this inhumane mindset. The leader of this newly formed gang proceeds to grab a medical knife from a nearby table, then stabbing you several times in the chest. As you attempt to grab his shoulder, he proceeds to push you off on to the ground. The rest of traitorous group then ignores your last breaths before removing your body from the facility. Minus ALL life points..))

C. Knowing that your words would only solve very little in this growing situation, you proceed to grab a gun from one of the lockers in the facility. You ask [REDACTED] who was promoting this plan, and they inform you who the CDC member is. You proceed to go take care of this problem, with the gun now loaded. . . ((Wrong Answer... +1 life point))

Scenario 10#

“The day before coma break was rapidly approaching, I began to set up an emergency response area for when phase three of the virus would occur. Looking over the supplies needed, I noticed a lack of pain killers in storage. It dawns on me that [REDACTED] was the person charged with stocking and counting the medical supplies for the last several days... This led to my analysis that,

A. Perhaps they have been actively using the pain killers prematurely for patients that we have taken into the facility. Though we can restock easily on these pain killers, it is worth talking to them about this as whole. ((Correct Answer))

- B. It would plague my thoughts... but it is possible she is using the pain killers herself to deal with this emotional time. It would be odd though, as the CDC screening process would potentially have picked up on this problem. Well, hopefully... they be able to explain this fully. ((Wrong Answer))
- C. Dare I say it's possible that [REDACTED] is throwing away pain killers and is potentially trying sabotage this CDC operation. If this is indeed the case, I and other members of the team will have to confront [REDACTED] quickly. ((Wrong Answer))

(Story Continue)

After so many hardships, we reach the nearing end of the virus life cycle. Many of my associates have done all they can to help contain this mass epidemic, though I feel that all our preparations come to this very moment. When X01-Red virus victims awake from their coma, this will begin our massive humanitarian effort to save as many as we can. I dare say this might be my final report, as I'm unaware how all will transpire from here. For the ones you find this report, I pray that you may understand that in times of crisis we do all that we can for people we sworn to protect. May that be reflected in how we address the final days of the X01-Red virus...

Red Cards; Questions and Answers

Scenario 11#

“A violent scream could be heard across the tents in ground zero operation base. A young woman had awoken from her coma and began to attack everyone around her with a chair.

██████████ had been hit so hard that his hazmat face shield had cracked, and blood was rushing from his now crushed left eye. It was clear what had to be done,

- A. Grabbing a gun, I shoot the woman in the forehead. This was the only means to protect ██████████ from being harmed any further. ((Wrong Answer))
- B. Grabbing a sleeping dart, I proceed to quickly get behind the crazed young woman and injected her neck with sleeping aid. Though this would hinder the recovery process, it would protect ██████████. ((Correct Answer))
- C. With group of my associates, we rushed the woman to ground. Restraining her to controllable state. ██████████ would have to move themselves to safe distances so we could take care of the more immediate problem. ((Wrong Answer))

Scenario 12#

“As I approached one of the temporary medical facility within ground zero church, a large explosion occurs in front of my eyes. The building is on fire from behind and the flames are growing. Knowing we had to choose among the CDC operatives and the infected, the choice was made to rescue...

- A. The infected, our sworn duty is to save them and thus why we are here. The priority would be getting them out of the building, despite their crazed state. ((Correct Answer... but due to the crazed state the infected were extremely hard to get out of the building. Costing many CDC operatives lives. - 5 life points))

B. The CDC operatives are more vital right now than saving the infected. The members in the church lives will be sacrificed for entirety of [REDACTED].

((Wrong Answer))

C. I ultimately just watch the fire burn saving none... I would reserve my energy to saving people that I had the power to do so. ((Wrong Answer... you take no damage to your life points.))

Scenario 13#

As I was rushing around the tents within ground zero operation base, I head shouting coming from associates. Looking in their direction I noticed in horror that a child held a gun and had shot one of the CDC members in the head. The young boy began to weep as soldiers pointed their guns at the child, getting ready to take aim and fire. I quickly,

A. Ran to the child, shouting top of my lunges “DON’T SHOOT!” and proceeded to get in-between the armed soldiers and the child. Wrapping your arms around the young boy as a shield. ((Correct Answer... however it is to late as the soldier’s fire on both you and the child. Killing you both... It would go down in history how your sacrificed changed the nature of arm civilian situations and new policies and procedures were created. Though you lost the game, you achieved “Saint” title.))

B. Turned and closed your eyes. The guns fire killing the boy. You have no time to deal with things that you cannot stop. ((Wrong Answer))

C. Proceed to watch as they take the child's life. You document this act of horror for the soldiers to be held accountable for death of the child. ((Wrong Answer))

Endings;

For the Prototype Testers (All died): Concluding this simulation, I hope this early version of this game provided the ground works for exciting scenario game. Though it is still rough, I appreciate you playing the game to the full extent.

For the Prototype Testers (One survived): Congratulations _____ you managed to survive the X01-Red virus epidemic. Though these events were entirely fictional, you managed to show case the necessary knowledge to “potentially” save an entire city. Concluding this simulation, I hope this early version of this game provided the ground works for exciting scenario game. Though it is still rough, I appreciate you playing the game to the full extent.

For the Prototype Testers (All survived): Congratulations players for making it out alive during the X01-Red virus epidemic. I believe if this ending has been achieved during the prototype testing... that I need up the difficulty of some cards more of a challenge. However, concluding this simulation, I hope this early version of this game provided the ground works for exciting

scenario game. Though it is still rough, I appreciate you playing the game to the full extent.
